Sealant Disclaimer

Proper Installation of Shower Enclosures: Silicone Application Guidelines

A correct shower enclosure installation requires the strategic application of silicone sealant in specific areas. These areas may include:

- Inside and outside extrusions and glass contacting the shower base, walls, and/or ceilings
- Mitered or stacked metal or glass joints
- Ends of extruded bases on thresholds and knee walls
- Holes or structural penetrations
- Glass-to-glass corners

Please note that while liquid silicone is necessary for proper installation, it is not provided by A3 Glass Fabricator. For guidance on proper application and use, please consult your preferred silicone manufacturer.
